

PRESENTATION TASK

In March 2021, the public health intelligence team was tasked with providing information, on a weekly basis, with respect to Covid-19 vaccination uptake within Swindon. Amongst its other uses, this piece of work assisted with diverting resources aimed to target specific geographical areas that were identified as having low vaccine uptake (including 1st dose, 2nd dose, 3rd dose/booster), in general or within specific age sub groups, and/or areas where a connection between low vaccine uptake and deprivation was established. For example, this work helped establish some of the places that the vaccination bus [would visit](#) or set-up vaccination clinics.

Use:

The latest NHS **weekly** vaccination data available [here](#), and in particular:

- the **1st dose** vaccinations for the different age groups within Swindon's MSOAs (available within the "MSOA" excel sheet)
- Swindon's population estimates at MSOA level from the National Immunisation Management Service (available within the "Population estimates (NIMS)" excel sheet)

To prepare a 5 minute presentation and:

1. Describe the **1st dose** vaccine uptake (i.e. vaccination rates, e.g. %of people vaccinated aged between 75-79 years who have had at least one dose) situation in Swindon's MSOAs.
2. Highlight any MSOAs of concern.
